19 March 1962

Dear Charlie,

25X1A

Attached herewith is a trip report on the three papers that I heard in Washington. These papers were not as helpful as had been hoped but I was able to spend time with [redacted] the National Bureau of Standards discussing the testing of large optical flats (in particular mirrors). Some of his thinking will be employed in the testing of future flats to make the testing easier and more accurate.

Best regards

Milt
